Art Unit: 2819

1. Claims 1-9 are allowed.
2. The following is an examiner's statement of reasons for allowance: a Sigma-Delta Analog-to-Digital Converter (ADC) having dithering that removes the idle channel tones of the sigma-delta converter where the idle channel tones are reduced by stretching the threshold window of a multi-level quantizer and a dithering sequence is added by stretching the thresholds window randomly. The randomly stretched window destructs the periodicity of sigma-delta ADC modulator's output sequence and removes the idle channel tones. This has not been shown in the prior art.
3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lunacek , et al disclose dithering an analog signal to improve measurement . Cvetkovic , et al disclose A/D conversion achieved by employing a piecewise continuous dither signal such that a signal that results from combining the dither signal with the signal to be converted, has a zero-crossing within each interval . Zero crossings of the combined signal are detected, and the instances where those crossings occur are encoded, one zero crossing for each interval.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Young whose telephone number is 571-272-1816. The examiner can normally be reached on Mon-Fri 7:30-4:00.
